

## **IQ Buildings Showcase**

Large buildings are some of the most valuable assets that organizations and individuals own. It is important that they are managed efficiently and that they are safe. Critical issues for large buildings are how many people are on any floor at a given time in case an evacuation is required. Access for people and vehicles has to be managed and children need to be protected from potential predators.

iOmniscient's Vision based Artificial Intelligence provides building managers with these capabilities in many countries.

With 60+ International Patents, iOmniscient specializes in addressing complex and crowded environments – doing things that no one else can do. In the video analytics arena, the company has the most comprehensive suite of Detection, Tracking and Recognition capabilities, from simple intrusion and counting systems to unique object detection in a crowd, multi-lingual License Plate Recognition & the world's first non-cooperative Facial Recognition for Crowded Scenes. These technologies are sewn together in various combinations to address the many use cases required by large buildings.

iOmniscient does MORE with LESS. Its solutions require fewer cameras, 90% less storage and network bandwidth and less computing resources. You can implement an intelligent system at ZERO incremental cost relative to a less intelligent system.
